**REPORT COMPILED FOR
PINE DALE MINE COMMUNITY CONSULTATIVE COMMITTEE
DETAILING SURFACE WATER, DEPOSITIONAL DUST
HVAS AND METEOROLOGICAL MONITORING
AUGUST 2013**

1 GENERAL COMMENTS

Job Number: 6880.

Date Samples Received: During the month of August 2013.

Samples received were sampled by RCA Laboratories – Environmental staff.

This report satisfies the requirements to monitor environmental parameters as presented in the Pine Dale Mine Environmental Protection Licence (EPL 4911).

2 ANALYTICAL PROCEDURES

The analytical procedures used by RCA Laboratories – Environmental are based on established internationally recognised procedures such as APHA and Australian Standards. Analytical test methods are detailed in **Table 1**. When an external testing laboratory is used to obtain the analysis of samples which become a part of this report, then the details of that laboratory's official report will be attached in an Appendix.

2.1 EPA SURFACE WATER MONITORING

Routine quarterly surface water monitoring was undertaken during the month of August 2013 at three surface water sites, EPA points 2, 3 and 14. Water quality analysis results are shown in **Table 2**. No samples were obtained from Points 4, 5 and 13 as there was no discharge occurring at these locations.

3.1.1 Allowable TSP Limits

The EPA Annual Mean TSP allowable limit is $90\mu\text{g}/\text{m}^3$. All TSP HVAS results recorded during this monitoring period are in compliance with consent conditions, as the *current rolling annual mean* (from September 2012 to August 2013) for the TSP unit is $24.4\mu\text{g}/\text{m}^3$, which is well below the allowable limit of $90\mu\text{g}/\text{m}^3$.

3.1.2 Allowable PM_{10} Limits

The EPA 24h Maximum PM_{10} allowable limit is $50\mu\text{g}/\text{m}^3$. The EPA Annual Mean PM_{10} allowable limit is $30\mu\text{g}/\text{m}^3$. All PM_{10} HVAS results recorded during this monitoring period conform to consent conditions, as the *current rolling annual mean* for the PM_{10} unit is $11.2\mu\text{g}/\text{m}^3$, which is below the allowable limit of $30\mu\text{g}/\text{m}^3$. The 24 hour maximum allowable limit of $50\mu\text{g}/\text{m}^3$ was not exceeded on any run day during the August 2013 monitoring period.

3.1.3 Comments

HVAS monitoring locations are shown in **Appendix 1**.

Graphical HVAS results presentations are shown in **Appendix 2**.

3.2 DEPOSITIONAL DUST

Depositional Dust Gauges at this facility conform to AS/NZS 3580.10.1:2003 and AS/NZS 3580.1.1:2007. Depositional Dust monitoring results are shown in **Table 5**.

3.2.2 Allowable Depositional Dust Limits

The EPA Long Term (Annual Average) Dust Limit is 4g/m² per month. All Depositional Dust results during this monitoring period are in compliance with consent conditions. The Annual Average for Dust Gauges D1, D2, D3, D4, D5 and D6 are all less than or equal to 1.1g/m² per month, which is below the allowable Annual Average Long Term Limit of 4g/m² per month.

Depositional Dust monitoring locations are shown in **Appendix 1**. Graphical Depositional Dust results are shown in **Appendix 2**.

4 BLASTING RESULTS

Blasting results for the month of August are shown in **Table 6**.

Notes: NT No Trigger. Blast monitoring unit was not triggered during the blast.

4.1.1 Allowable Blasting Limits

Conditions of EPL 4911 state that in relation to airblast overpressure levels a result of greater than 115dB must not be observed at any noise sensitive location for more than 5% of the total number of blasts over each annual reporting period. All blasts within the annual reporting period (100% of blasts) are not to exceed the compliance criteria of 120dB. Ground vibration peak velocity levels must not exceed 5mm/sec for 95% of blasts, whilst an intensity of 10mm/sec must not be exceeded by any blast during the reporting period. The reporting period runs as a rolling 12-month average from September 2012 to August 2013.

During August 2013, there were nil exceedances of the EPL conditions for both overpressure and vibration levels. In terms of the rolling annual average, no blasts have exceeded the 100% compliance conditions of 120dB and 10mm/sec for overpressure and vibration respectively. The overpressure and vibration criteria of 115dB and 5mm/sec, respectively, have not been exceeded for more than 5% of the blasts during the reporting period.

Graphical blasting results from overpressure and vibration are presented in **Appendix 2**.

5 NOISE MONITORING RESULTS

Routine quarterly noise monitoring was not required to be undertaken this month. Quarterly noise monitoring is next scheduled to be undertaken during the October 2013 period.

6 OPERATIONAL ACTIVITIES

Pine Dale Mine production rates in August 2013 were good, with no major issues recorded. There were 22 production days available with no weekend work undertaken. Overall, two blasts were shot throughout the month.

Relatively low rainfall was observed throughout the month, 18.2 mm total, which predominantly fell on the 8th, 13th and 17th of August. Production material targets have largely been achieved this month, with coal tonnage slightly above target, whilst overburden was above forecast. In total 159,000 tonnes of overburden were excavated and 25,600 tonnes of coal delivered to Mt Piper Power Station.

7 SUMMARY

During the month of August 2013 all environmental monitoring constituents were found to be in compliance with EPL 4911.

Quarterly surface waters sampling were sampled this month, with all required sites sampled.

Rolling annual averages from both the TSP and PM₁₀ High Volume Air Samplers are currently well below the EPA Annual Mean TSP and PM₁₀ criterion of 90µg/m³ and 30µg/m³ respectively. There were zero exceedances of the PM₁₀ short term impact assessment criteria of 50µg/m³ over twenty-four hours during August 2013.

Currently there are no depositional dust gauge results which are greater than the EPA Long Term (annual average) criteria of 4g/m².month based upon a rolling average of the past 12 months.

During August the blasting requirements documented in the Pine Dale Mine EPL was not exceeded. During the previous twelve month reporting period, there were nil non-conformance's based upon the 95% or 100% limits for either overpressure or vibration levels.

Quarterly noise monitoring was not conducted this month, and is scheduled to be conducted in October 2013.
